THE Photoshop LAYER BASICS All Photoshop images are made up of layers. The layers of an image are stacked one on top of the other. When you use tools such as the Move or Copy tool, you are actually moving, copying, or cutting and pasting the layers of an image. This is not unlike doing real-life construction. If you have ever built a small project, you know that most everything you need to do it has to be purchased at a store, or has to be designed to fit a specific template or measurement. Once the materials are in place, everything is placed by layer on top of the others. The end result will be a finished picture, or whatever you were trying to build in the first place. Adobe encourages users to create files that are organized with layers. As you add and manipulate layers, you may want to arrange them logically to get the desired results. When you're creating artwork that you want to have layers, arrange them so that the image is easy to modify down the line. This can be done by creating a new layer and moving everything you need to modify below it or adding another layer beneath it.
